

## Accessories for pad printing

## Ring blade removal device AV

for the professional removal  
of ring blade and ink cup

## Mode of operation ring blade removal device

With only three hand movements, ring blade and cup housing are separated effortlessly.

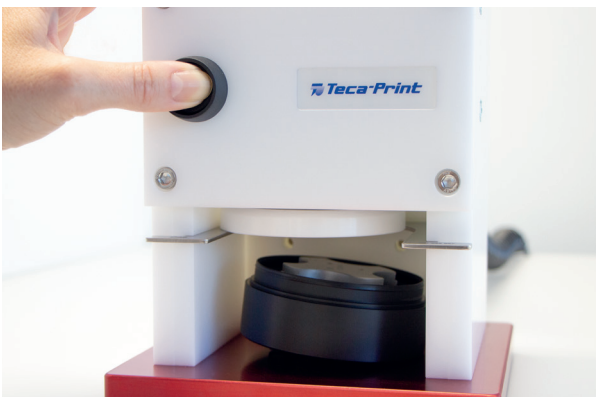

The stripper plate suitable for your ink cup size is inserted into the ring blade removal device.

Next the clean ink cup is pushed onto the stripper plate as far as possible, with the open side of the ink cup facing up.

By pressing the start button, the cup housing is pushed downwards and separated from the ring blade.

Ink cups are among the most important, but also the most sensitive accessories in pad printing.

The pneumatic ring blade removal device AV ensures the professional removal of the ring blade from the cup housing. It is available in two sizes.

For the device AV S, stripper plates are available for ink cup sizes Ø 56 to Ø 96 mm.

The device AV M can be fitted with larger stripper plates for cup sizes Ø 96 mm to Ø 140 mm.

The ring blade and cup housing are separated slowly, using a uniform pressure.

Indentations on the blade or body of ink cup which can cause ink leakage and ineffective doctoring of the cliché are then avoided. This will give improved performance and longer life to both the ring blades and cliché plates.

### Ring blade removal device AV S

for ink cup sizes Ø 56 mm to Ø 96 mm

description	part number
ring blade removal device AV S	701 935 778
stripper plate for ink cup Ø 56 mm	701 935 690
